Earning LEED Points with JM Eagle

JM Eagle plastic pipe can help construction projects earn LEED points generally in two areas: reworked-material content and location to jobsite.

Recycled content

JM Eagle pipe varies in reworked content by product, plant and day-to-day operations. The company strives to reuse material any time possible, and often achieves reworked content of higher than 75 percent.

Location to jobsite

JM Eagle's 22 plant locations in the United States are located well within 350 miles of most jobsites.

Butner, NC
Meadville, PA
Adel, GA
Batchelor, LA
Columbia, MO
Magnolia, AR
Wilton, IA
Conroe, TX
Wharton, TX
Tulsa, OK
Hastings, NE

Pueblo, CO
Kingman, AZ
McNary, OR
Perris, CA
Fontana, CA
Visalia, CA
Cameron Park, CA
Sunnyside, CA
Tacoma, WA
Stockton, CA

To determine the recycled content of a pipe, the plant location at which it was made, and the distance between the plant and the project site, contact your JM Eagle representative for immediate assistance.
