ALL PRODUCTION LINES
UP AND RUNNING IN SEPT.!

GRAND OPENINGS AT MEADVILLE AND SUNNYSIDE PE PLANTS

LEARN MORE!

- Water & Sewer
- Water & Irrigation
- Oil & Gas
- Communication Duct

JM Eagle's scheduled production expansion of solid-wall high-density polyethylene pipe at two of its plants is on schedule, with an anticipated completion of all lines this September.

To mark the production expansion JM Eagle will hold grand opening events at each plant in October. The grand opening for Meadville, Pa., will be on October 18, 2012 and for Sunnyside, Wash., on October 25, 2012.

JM Eagle's production expansion will increase the number of PE lines at the Meadville, Pa., plant and convert the Sunnyside, Wash., plant from PVC to PE.

Political leaders, media, and VIP guests have been invited to tour the state-of-the-art facilities. Guests at both plants will see the PE pipe manufacturing process first-hand with PE pipe for water, sewer, telecommunications duct, and

oil and gas gathering produced at both Sunnyside and Meadville plants. The Sunnyside plant will also manufacture PE pipe for irrigation.

"We're proud of the steps we have taken to better serve our customers," said Neal Gordon, JM Eagle Vice President of Marketing and Waterworks Sales. "We look forward to sharing our good work with political leaders and VIP guests at the grand openings."

The investment into the production capacity of Southern Washington and Western Pennsylvania will strengthen JM Eagle's polyethylene pipe production and enhance its wide distribution throughout the northern United States.
