**Regarding: AWWA C909 PVC Water Main Pipe**

Dear Mr. Wang:

The Medina County Sanitary Engineer's (MCSE) office first approved the installation of AWWA C909 PVC water main pipe material on County owned and maintained water lines in 2004. Since that time, thousands of lineal feet of AWWA C909 PVC has been successfully installed and is currently in operation in the MCSE water distribution system. We consider AWWA C909 PVC as the primary competition to Ductile Iron Pipe.

Our MCSE Line Maintenance department is responsible for the installation of water taps for our customers, and have experienced problems with other pipe materials splitting during tapping operations. We have had great success in tapping the AWWA C909 PVC pipe, and have not experienced any pipe splitting.

We will continue to specify and approve the installation of AWWA C909 PVC water line on MCSE projects.

Sincerely,

Dale Clark  
Project Inspection Supervisor
