EAGLE CORR PE RECEIVES NTPEP APPROVAL

JM Eagle's Eagle Corr PE (Dual Wall) pipe is on the road to specification on more transportation projects, as the product manufactured at the Wharton, Texas, plant receives NTPEP certification.

Already approved by seven states for Department of Transportation projects, the Eagle Corr PE product for drainage applications is now open for use in several additional states that conform to NTPEP (National Transportation Product Evaluation Program) standards.

"The NTPEP subjected Eagle Corr PE to significant testing and examination in considering approval," says Brad Pounders, JM Eagle HDPE sales manager. "Clearly this organization believes that the superior attributes of Eagle Corr PE make it suitable for the rigors of roads and highways."

NTPEP audit requirements conform with the latest version of AASHTO Standard Specifications (M252 and M294). JM Eagle's Meadville, Pa., and Stockton, Calif., plants are currently undergoing audits for Eagle Corr PE product approval.

Seven states—California, Mississippi, Nevada, New Mexico, Oregon, Tennessee and Washington—had already approved Eagle Corr PE for use in state-funded and private transportation projects.

JM Eagle introduced its Eagle Corr PE single wall and dual-wall products in 2009. Miles of it have already been installed in large- and small-scale projects across the country.

Eagle Corr PE from JM Eagle is the first choice in gravity flow drainage applications. Dual Wall features a dual-crown corrugated exterior for greater pipe stiffness values and a hydraulically

smooth interior for maximum efficiency, plus a superior flexible conduit design. It supports H-25 live loads with a minimum cover of 1 foot, while allowing for cover heights of 100 feet.

Eagle Corr PE Single Wall is a more economical option for drainage applications where a more heavy-duty pipe is not required. A full line of standard and custom fittings in either a soil-tight or watertight connection complements both products.

"JM Eagle's Eagle Corr PE products provide the solution for today's drainage applications," says Pounders. "We look forward to serving even more markets and providing value to their transportation projects."
